

Carbon Reduction Plan

Company name: mylife Diabetes Care

Publication date: 21st August 2026

Commitment to achieving Net Zero

mylife Diabetes Care is committed to achieving Net Zero emissions by 2050.

Baseline Emissions Footprint

Baseline emissions are a record of the greenhouse gases that have been produced in the past and were produced prior to the introduction of any strategies to reduce emissions. Baseline emissions are the reference point against which emissions reduction can be measured.

Baseline Year: 2025	
Additional Details relating to the Baseline Emissions calculations.	
<i>2025 was the first year of emission calculations. Calculations are done according to the greenhouse gas (GHG) protocol. The following scope 3 subcategories are included:</i>	
<i>- 3.1 Purchased goods and services</i>	
<i>- 3.2 Capital goods</i>	
<i>- 3.3 Fuel- and energy-related activities</i>	
<i>- 3.4 Upstream transportation</i>	
<i>- 3.5 Waste generated in operations</i>	
<i>- 3.6 Business travel</i>	
<i>- 3.7 Employee commuting</i>	
<i>- 3.9 Downstream transportation</i>	
Baseline year (2025) emissions:	
EMISSIONS	TOTAL (tCO ₂ e)
Scope 1	115 tCO ₂ e
Scope 2	114 tCO ₂ e
Scope 3	53429 tCO ₂ e
Total Emissions	53657 tCO ₂ e

Current Emissions Reporting mylife Diabetes Care

Reporting Year: 2025	
EMISSIONS	TOTAL (tCO2e)
Scope 1	115 tCO2e
Scope 2	114 tCO2e
Scope 3	53429 tCO2e
Total Emissions	53657 tCO2e

Emissions reduction targets

In order to continue our progress to achieving Net Zero, mylife Diabetes Care has adopted the following carbon reduction targets according to SBTi standards (not submitted to SBTi verification) on corporate level:

Overall Net-Zero Target: mylife Diabetes Care commits to reach net-zero greenhouse gas emissions across the value chain by 2050 from a 2025 base year.

Near-Term Targets: mylife Diabetes Care commits to reduce absolute scope 1 GHG emissions 25% and 100% renewable electricity sourcing by 2031 from a 2025 base year. mylife Diabetes Care also commits to reduce scope 3 emissions 42% per unit of million CHF value added by 2031 from a 2025 base year.

Long-Term Targets: mylife Diabetes Care commits to reduce absolute scope 1 GHG emissions 90% by 2050 from a 2025 base year and maintain 100% renewable electricity sourcing. mylife Diabetes Care also commits to reduce scope 3 GHG emissions 97% per million CHF of value added by 2050 from a 2025 base year.

Scope 3 emissions contain the following categories:

- 3.1 Purchased goods and services
- 3.2 Capital goods
- 3.3 Fuel- and energy-related activities
- 3.4 Upstream transportation
- 3.5 Waste
- 3.6 Business travel
- 3.7 Employee commuting
- 3.9 Downstream transportation

Carbon Reduction Projects

Completed Carbon Reduction Initiatives

No specific actions have been initiated yet. mylife Diabetes Care was established as a spin-off from the Ypsomed Group and has been operating as an independent company since August 2025. Since the separation, the company has taken a proactive approach to developing its own decarbonization strategy. As an important first step, a comprehensive Carbon Footprint Assessment was completed in July 2026.

Building on this assessment, a dedicated decarbonization plan, independent of the Ypsomed Group, has been developed. Further work is now planned to refine this plan by adding greater granularity and defining concrete measures, timelines, and priorities for a comprehensive near- and long-term action plan.

Future carbon reduction projects

In the future we aim to implement measures such as:

- Make scope 3 assessment more robust, with less monetary ratios for purchased goods and including use and end of life for sold products.
- Ecodesign on consumables to extend their wearability.
- Ecodesign on the products to make them more reliable, more repairable, with longer lifetime thanks to better ability to be updated and upgraded.
- Investigations in device and consumables take-back and reuse.
- Better maintenance scheme for company-owned machines to expand their lifetime and avoid new capital goods spendings and process improvement to substantially reduce scrap rate, with particular focus on components with high carbon footprint.
- Reduce the rate of upstream transportation by air freight.
- Remove 100% of fossil fuels powered heating systems, for instance by converting to heat pump.
- 100% renewable electricity (with GOs – Guarantees of Origin – certificates)

Declaration and Sign Off

This Carbon Reduction Plan is compliant with SBTi reference trajectories.

Emissions have been reported and recorded in accordance with GHG Protocol.

This Carbon Reduction Plan has been reviewed and signed off by the executive committee.

Signed on behalf of the Company:

Sébastien Delarive

CEO, mylife Diabetes Care

Date: 21st August 2026
